

Getting to know some zany bugs with the Alfa-DINO-bet

The book is filled with hundreds of bugs, but really there are only about twenty distinct types. They are mostly insects; you know six legged and three body parts (head, thorax and abdomen). They fly, crawl, swim and eat. Well that's what bugs do. But these also play water games, scold dinosaurs, eat shapes, laugh and play music. There are also examples of incomplete metamorphosis (egg, immature adult, mature adult), grasshoppers for example and complete metamorphosis (egg, larvae, pupa, adult) butterflies, moths and beetles for example. You are only looking for 9.

The tenth item deems you Alfa-DINO-bet bonus worthy!
